

# The VersaBoard™

*The versatile positioning device for head and neck treatments.*

Treating head, neck, and brain patients off of the couch is the latest approach for treating with IMRT. Bionix Radiation Therapy now offers two styles of carbon fiber boards so that both wide and narrow bore CTs can take advantage of the best possible treatment for their patients. Both boards offer a full 360° treatment range for both prone and supine positioning. The Bionix shoulder suppression system, along with easy to use disposable thermoplastic masks, allows for the most rigid patient positioning on the market. Perhaps the best feature of the VersaBoard is the simple, reproducible, and durable nature that the Bionix design has perfected. Your facility only deserves the best, and the Bionix VersaBoard can help get you there.

## **RT-7040 Carbon Fiber VersaBoard**

- 24" at the widest point
- Fits SecureVac, Silverman or MoldCare head cushions
- Ruled edge for maximum reproducibility
