BELLY STEP

The new BELLY STEP foam based immobilisation system provides one of the most comfortable devices available on the market. The different size cushions for the belly guarantee highest precision, perfect immobilisation and perfect repositioning in the routine pelvic and belly positioning.

The system was designed to improve the accuracy in a patient-friendly and non-invasive manner. The BELLY STEP allows for comfortable positioning whenever accurate and reproducible immobilisation is an essential prerequisite for optimised therapy schedules.

It simplifies and expedites the radiation therapy procedure and increases cost efficiency. In addition, even MRT or PET planning is possible since BELLY STEP consists only of highest quality metal-free materials.

Advantages
