PRO STEP

The PRO STEP was designed to improve the accuracy of the positioning of the lower abdomen and for the extremities. The system combines the advantages and the functionality of the FEET STEP and the KNEE STEP. If you use both cushions together with the PRO STEP baseplate the performance will be enhanced, especially when treating in the pelvic area.

The PRO STEP baseplate can be attached to every couchtop on an indexed position. On the lower end of the baseplate the KNEE STEP can be adjusted, eventually combined with KNEE STEP elevation blocks.

The mounted sliding bed for the FEET STEP allows 17 different longitudinal (1,5 cm steps) and 10 different indexed angular adjustment positions (5° steps).

Because of the indexed positioning of the the lower extremities, the PRO STEP guarantees highest precision and perfect repositioning in the plevic area. It simplifies and expedites the radiation therapy procedure and increases cost efficiency.

Advantages

Perfect Positioning and Precise Repositioning

- # Knee Step and Elevation Blocks
- # Mounted sliding bed with Feet Step
- # 17 different indexed longitudinal adjustment positions (1,5cm steps)
- # 10 different indexed angular adjustment positions (5° steps).

Highest Comfort in Pelvic Positioning

- # Polyethylene cushions
- # Pain free comfortable patient positioning

Easiest Handling and Highest Quality Integrated Indexing System polyethylene
